Application No. 10/549,753 Reply to Office Action of September 21, 2009

## IN THE CLAIMS

Do Not Enter CF

Please amend the claims as follows:

Claim 1 (Previously Presented): A steel wire for a high-strength spring having superior workability, the steel wire comprising tempered martensite, and comprising by mass:

C: 0.53 to 0.68%;

Si: 1.2 to 2.5%;

Mn: 0.2 to 1.5%:

Cr: 1.4 to 2.5%;

Al: 0.05% or less, excluding 0%;

at least one member selected from the group consisting of Ni: 0.4% or less, excluding

0%; V: 0.4% or less, excluding 0%; Mo: 0.05 to 0.5%; and Nb: 0.05 to 0.5%; and a remainder consisting essentially of Fe and inevitable impurities;

wherein:

the steel wire has a prior austenite grain size number of 11.0 or larger; and a ratio  $(\sigma_{0.2}/\sigma_B)$  of 0.2% proof stress  $(\sigma_{0.2})$  to tensile strength  $(\sigma_B)$  in the steel wire is 0.85 or lower.

Claim 2 (Original): The steel wire according to Claim 1, wherein the content of manganese ranges from 0.5 to 1.5%.

Claim 3 (Original): The steel wire according to Claim 1, wherein the 0.2% proof stress ( $\sigma_{0.2}$ ) is raised by 300 MPa or more when annealing at 400 °C for 20 minutes is conducted
